

POLYMERIC IMAGING

TECHNICAL BULLETIN

#3395 Static Eliminator

DESCRIPTION:

This static eliminator helps dissipate charges built up between the screen and substrate, which causes the ink to web.

APPLICATION:

Add 2-3% by weight if problem persists start other means to put humidity into the air. Usually by mopping the floors and letting them dry on their own or with the use of a humidifier.

Make sure the press is well grounded as this will help to dissipate the static as well.
